

SALMAN DANISH

SENIOR SOFTWARE ENGINEER

Lahore, Pakistan | +92-313-0400081 | salmandanishmirza@hotmail.com | linkedin.com/in/sdanish1

PROFESSIONAL SUMMARY

Senior Software Engineer with 7+ years of experience designing and delivering enterprise web applications across frontend and backend systems. Specialized in AI, Angular, React, TypeScript, .NET Core, SQL, REST APIs, and modern application architecture, with experience building systems used by 50,000+ users. Own end-to-end feature delivery from architecture and implementation through automated testing, CI/CD, and production deployment. Experienced in modernizing legacy AngularJS applications, reducing page load times by up to 70%, building real-time communication and notification systems, designing microservices, and collaborating across product, design, QA, and engineering teams to deliver maintainable production systems.

TECHNICAL SKILLS

AI & AI-Assisted Development: Claude Code, Cursor, Continue.dev, Agentic Workflows, AI Coding Agents, LLM-Based Development, Loop Engineering, Spec-Driven Development

Frontend: Angular, React, TypeScript, JavaScript, AngularJS, HTML5, CSS3, SASS, RxJS, NgRx, Angular Signals, Signal Store, Angular Material, Kendo UI, PrimeNG, Tailwind CSS, Bootstrap

Backend: .NET Core, ASP.NET Core, Node.js REST APIs, GraphQL, gRPC, SignalR, Microservices, Repository Pattern

Databases: SQL Server, MySQL, MongoDB, Azure Cosmos DB, Firebase

Architecture: Distributed Systems, Clean Architecture, Design Patterns, State Management, RBAC, Performance Optimization, Monorepo Architecture, API Design

Testing: Jest, Unit Testing, End-to-End Testing, Test-Driven Development, SonarQube

DevOps & Tools: Azure DevOps, CI/CD, Docker, Git, Swagger, Jira, Trello, Power Automate

Integrations: Salesforce, OneSignal, WebTranslateIt, Form.io

PROFESSIONAL EXPERIENCE

Software Engineer | Facelift Mar 2023 – Present

- Serve as the sole frontend engineer within a 4-person Core Team, owning frontend architecture, implementation, testing, and production delivery for platform features used across approximately 60 organizations.
- Architected and delivered a new Angular-based real-time chat system, replacing the legacy JavaScript implementation and supporting internal and external participants through email-based access. Designed the solution across ~10 Angular components and integrated it across 3 dependent teams.
- Engineered chat workflows supporting approximately 15–20 participants per conversation, ~30–40 messages per day per active chat, and image attachments of up to 10 images per message.
- Led the migration of 3 legacy AngularJS modules covering ~10 screens and ~30 components to Angular 19, while introducing 3 new application routes and modernizing the frontend architecture.
- Reduced application page load time by ~70%, from approximately 10 seconds to 3 seconds, through OnPush change detection, lazy loading, AOT compilation, pure pipes, and Angular Signals.
- Designed and integrated OneSignal push notifications supporting approximately 1,500 notifications per day across multiple organizations and 4 notification types.
- Implemented application state management using NgRx and Signal Store across complex workflows, applying reusable architectural patterns to maintain scalable and testable code.
- Implemented internationalization across 4 languages and integrated REST and GraphQL APIs to support multi-language product releases and platform functionality.
- Maintained ~85% automated test coverage using Jest and end-to-end testing, supported by 5 CI/CD pipelines and biweekly production deployments.
- Collaborated with cross-functional teams to take features from technical design, documentation, and Figma implementation through code review, testing, CI/CD, and production release.
- Designed and deployed scalable AI agentic systems using Claude Code, reducing time-to-market for production features by 70% while ensuring code quality.

- Implemented web accessibility best practices during the migration of legacy modules to ensure inclusivity and compliance with modern interface standards.

Software Engineer | Aquila 360 Feb 2021 – Mar 2023

- Delivered full-stack solutions across three concurrent engagements—Social27, ALEC, and an internal platform—owning features from technical design through production deployment.
- Developed and maintained a platform serving 50,000+ active users, including real-time communication and high-volume data processing capabilities.
- Built a bulk-upload pipeline capable of processing up to 100,000 records per execution.
- Led system design and database design for .NET Core microservices backed by MongoDB, using gRPC for internal service communication and integrating Salesforce for enterprise data exchange.
- Improved Angular application performance through NgRx state management, OnPush change detection, lazy loading, and AOT compilation.
- Owned end-to-end development of the ALEC E-Forms platform as the sole full-stack engineer, delivering dynamic form creation, PDF generation, role-based access control, and automated workflows through Power Automate.
- Led a two-developer backend team on an internal product, coordinating technical delivery across frontend and backend workstreams.
- Managed Azure DevOps CI/CD pipelines and partnered with QA to resolve defects and maintain stable production releases.
- Developed an ecommerce and POS application using Node.js and PostgreSQL, owning full-stack delivery from database schema design through API implementation and frontend integration.

Associate Software Engineer | TechnoCares Nov 2019 – Feb 2021

- Progressed into a full-stack delivery and leadership role, taking ownership of project execution, team coordination, and developer mentorship.
- Led three frontend developers in redesigning a 20+ screen application within one week despite having no prior knowledge of the existing codebase.
- Developed a role-based Workshop Maintenance System for the automotive industry, supporting ticket management, technician assignment, inspections, billing, and vehicle delivery workflows for 50+ internal users.
- Contributed to a car marketplace platform serving 5,000+ users and redesigned the corporate website to modernize its UI/UX, ensuring a fully responsive design across all devices.
- Built Angular applications using Angular 7, Bootstrap, and Now UI Kit, with real-time notifications implemented through SignalR.
- Integrated REST APIs with ASP.NET and developed SQL stored procedures supporting application functionality.
- Mentored and guided 4–5 interns, coordinated development and QA workflows, and drove resolution of production issues to support stable and timely releases.
- Conducted rigorous cross-browser compatibility testing during the development of web applications to ensure consistent performance and UI rendering across Chrome, Firefox, Safari, and Edge.

Customer Support Executive | Softbeats Mar 2019 – Nov 2019

- Developed and optimized SQL stored procedures for application data retrieval and reporting.
- Created and customized Crystal Reports based on client business requirements.
- Coordinated deployment of 15 servers and configuration of 40 client machines with a team of three interns.
- Resolved approximately 75 customer support tickets per month while maintaining a 95% customer satisfaction rate.
- Gathered client requirements and coordinated with development teams to resolve technical issues and support successful deployments.

EDUCATION

Bachelor of Science in Software Engineering

COMSATS University Islamabad / Lancaster University — Dual Degree Program
2014 – 2018
